CompassCom®

CompassCom® Is Releasing Version 7.3 Of CompassTrac®

Palm Springs, California - (March 1, 2019) - CompassCom® is releasing version 7.3 of CompassTrac®, its industry leading mobile resource management (MRM) platform at the Esri Business Partner Conference in Palm Springs. CompassCom empowers users of ArcGIS to leverage their investment in GIS with real-time data, improving response time and to gain knowledge to make decisions. CompassCom is celebrating 25 years as an Esri Business Partner providing users, integrators and 3rd Party software companies that leverage Esri technology, plug and play, connectivity with real-time telematics and IoT devices. Bring your own device technology ensure users can select hardware for use in the field that best meets their operational workflow. Our JavaScript, HTML5 CompassTrac viewer, supports desktop, laptop, tablet and smartphone users providing portability of the data to empower people at all levels in making critical decisions.

Brant Howard, Founder and CEO of CompassCom explains "Real-Time data is delivered by the CompassCom Platform leveraging the power of ArcGIS to enable users to configure their solution to meet their specific workflow requirements. Operations require meaningful map data in the background of their MRM solution that matches their mission to improve customer service, safety and efficiency".

Operational support for Public Works, DOTs, Utilities, first responders, defense, solid waste and aviation departments require map data that supports a meaningful response to deliver the right resources, to the right place, at the right time. ArcGIS map data configured to the agencies needs and the connectivity of CompassCom real-time telematics enables people to make decisions with current and accurate data.

"CompassCom's mobile IoT Platform is perfectly suited for Esri Business Partners providing 3rd party software that want to add real-time data to enhance their solution." said Mr. Howard. "CompassLDE plug and play connectivity supports GeoEvent Server, Esri REST and Stream data to give integrators the best option to make their end solution live with moving vehicles, people and IoT sensors.

The CompassCom offering includes the CompassLDE MRM/IoT Platform, CompassTrac viewer App, and CompassReports App for analytics. Our solution is flexible to support on premise, cloud and managed service deployments. Bundles are available for vehicle hardware, sensors and wireless service with configuration and installation support.

Visit us at booth #110 at the Esri Business Partner Expo in Palm Springs, March 2-4th. Contact CompassCom today for a live demo, API documentation, partner opportunities or to discuss how we can make your Esri App move with real-time data!
